EXPERIENCE

Research Assistant

Dartmouth College/Dartmouth Security and AI Lab

📅 Sept 2018 – March 2021

📍 Hanover, NH

- Developed and formalized novel algorithms in the fields of **Collective Classification** and **Graph Neural Networks**.
- Applied these algorithms to **Social Network prediction problems**.
- Managed datasets with terabytes of data as well as the dozens of computation jobs used to process and analyze this data.

Software Engineering Internship

Amazon.com

📅 Jan. 2017 – Dec. 2017

📍 San Luis Obispo, CA

- Worked as part of an Amazon Prime server team; my code has directly affected millions of transactions.
- Redeveloped the code deployment pipeline and rollback system to enable my team to quickly recover from issues in production code.
- Developed API to facilitate automatic upselling of Prime memberships to customers based on their current membership status, region, and other factors.

PROJECTS

Social Network Analysis for Cryptocurrency Price Prediction

Dartmouth Security and AI Lab

📅 Feb. 2019 – March 2021

- Developed algorithms to predict future prices of top cryptocurrencies by analyzing massive amounts of social media data.
- Organized and monitored tens of thousands of hours of computation time to complete the experiments.
- Presented results at **2019 IEEE International Conference on Blockchain and Cryptocurrencies** in Atlanta, GA.

Counter-terrorism Graph Time Series Analysis

Dartmouth Security and AI Lab

📅 Oct. 2018 – March 2021

- Explored prediction problems in a social network styled dataset which included thousands of terrorists and hundreds of terroristic factions as members.
- Designed and tested novel algorithms and techniques to use on this uniquely challenging dataset.
- Improved predictive performance by generating novel features based on centrality, flow, and balance metrics.

EDUCATION

M.S. in Computer Science

Dartmouth College, Hanover, NH

📅 Projected December 2021

- Research work focused on machine learning as applied to social networks.
- Coursework focused on machine learning, cryptography, and math-heavy applications of CS.

B.S. in Computer Science

Cal Poly, San Luis Obispo, CA

📅 September 2014 – June 2018

- Graduated with honors (3.7 GPA).
- Completed interdisciplinary minor in Data Science supervised by Professors Alex Dekhtyar and Dennis Sun.
- Undergraduate studies were tailored to get a background in machine learning, software engineering, and statistics.

SKILLS

Python

Pandas, Numpy

PyTorch, Scipy, SKLearn

LaTeX, Markdown

Java

C/C++

Git

R/ggplot

JavaScript

TECHNICAL SKILLS

Abstract Problem Solving

Build Systems Experience

Command Line Tools

Data Aggregation and Cleaning

Data Scraping

Deep Learning

Functional Programming

Large Scale Computation

Object-Oriented Programming

Parallel Computing

Software Design

Statistical Modeling and Testing
